

To All:

On behalf of the entire E-Finity Team I am pleased to announce that Ed Berger has joined the company to provide engineering support. Ed will be working closely to support prospective projects. Ed's initial focus will be the refining of our qualification system as well as conducting analyses of potential turbine systems using Capstone's Ultra-Low Emission Distributed Energy products. Capstone's products can provide energy independence for clients as well as operational savings.

Prior to joining E-Finity, Ed was employed with RPA Engineering as Manager of Energy Services. There Ed worked on energy related projects including performing energy audits and system recommendations for their clients; the result of which has been installations and recommendations of cogeneration systems ranging from 100 kW to 20 MW. Ed was also employed at UGI Utilities where he provided their customers with various services including the design of cogeneration systems, the design of systems for alternative fuels utilization including waste methane, high efficiency HVAC designs, central plant and infrastructure upgrades, and provided training for engineers working with customers on alternative technologies. Ed's expertise of the natural gas industry will help E-Finity introduce the Capstone technology to previously untouched market segments.

Ed brings extensive knowledge of the industry to the E-Finity Applications Team. He holds a Masters Degree from Alvernia College in Business Administration as well as a Bachelor's Degree of Science from Temple University in Mechanical Engineering. Ed is an active member of the Association of Energy Engineers (AEE) and also holds their Certified Energy Manager (CEM) certification.

Please help welcome him to the E-Finity Team and the Capstone Mid-Atlantic Territory.

Jim Bondi

Director, Applications Engineering
